Assignment- 02

Development of a Virtual Environment Using Unity or Unreal Engine

Course: Introduction to AR/VR **Marks:** 5

- **Objective:** To develop a 3D virtual environment using Unity or Unreal Engine and understand the basic concepts of virtual world creation.
- **Assignment Description:** Create a simple virtual environment of your choice (e.g., a room, laboratory, classroom, garden, or robotic workspace) using Unity.
- Your virtual environment should include the following:

1. **3D Objects:** Add at least five 3D objects (e.g., tables, chairs, walls, trees, or robotic components).
2. **Environment Design:** Apply suitable materials, colours, lighting, and textures.
3. **Navigation:** Implement a basic first-person or third-person camera to explore the virtual environment.
4. **Interaction (Optional):** Add one simple interaction, such as object rotation, movement, selection, or clicking.

- **Submission Requirements**

- Submit a video of the developed virtual environment.
- Submit a short report (1–2 pages) describing the environment, tools used, and development process.
- Submit the Unity/Unreal Engine project files or a short screen-recording demonstrating the environment.

- **Evaluation Criteria**

No.	Evaluation component	Marks
1	Creation and placement of 3D objects	1.0
2	Environment design, materials and lighting	1.0
3	Camera setup and navigation	1.0
4	Creativity and overall functionality	1.0
5	Submission quality, video and report	1.0
	Total	**5.0**
